State	Description
CLOSED	No <u>connection</u> exists
LISTEN	Passive <u>open</u> <u>received</u> ; <u>waiting</u> for <u>SYN</u>
SYN-SENT	<u>SYN</u> sent; <u>waiting</u> for <u>ACK</u>
SYN-RCVD	<u>SYN + ACK</u> sent; <u>waiting</u> for <u>ACK</u>
Established	<u>Connection</u> <u>established</u> ; <u>data</u> transfer <u>in</u> progress
FIN-WAIT - 1	<u>First</u> <u>FIN</u> sent; <u>waiting</u> for <u>ACK</u>
FIN-WAIT - 2	<u>ACK</u> to <u>first</u> <u>FIN</u> <u>received</u> ; <u>waiting</u> for <u>second</u> <u>FIN</u>
CLOSE-WAIT	<u>First</u> <u>FIN</u> <u>received</u> , <u>ACK</u> sent; <u>waiting</u> for application <u>to</u> <u>close</u>
TIME - WAIT	<u>Second</u> <u>FIN</u> <u>received</u> , <u>ACK</u> sent; <u>waiting</u> for <u>2MSL</u> <u>time-out</u>
LAST - ACK	<u>Second</u> <u>FIN</u> sent; <u>waiting</u> for <u>ACK</u>
CLOSING	Both <u>sides</u> decided <u>to</u> <u>close</u> <u>simultaneously</u>

Time wait Timer

The Time wait timer (2 MSL) is used during connection termination. The maximum Segment Life time (MSL) is the amount of time any segment can exist in the Network before being discarded. The implementation needs to choose a value for MSL. Common values are 30 sec, 1 min or even 2 min. The 2 MSL timer is used when TCP performs an Active close and send the Final Ack. The connection must stay open for 2 MSL amount of time to allow TCP to resend the final Ack in case of Ack is lost. This requires that the RTO timer at the other end times out and new FIN and Ack segment are resent.

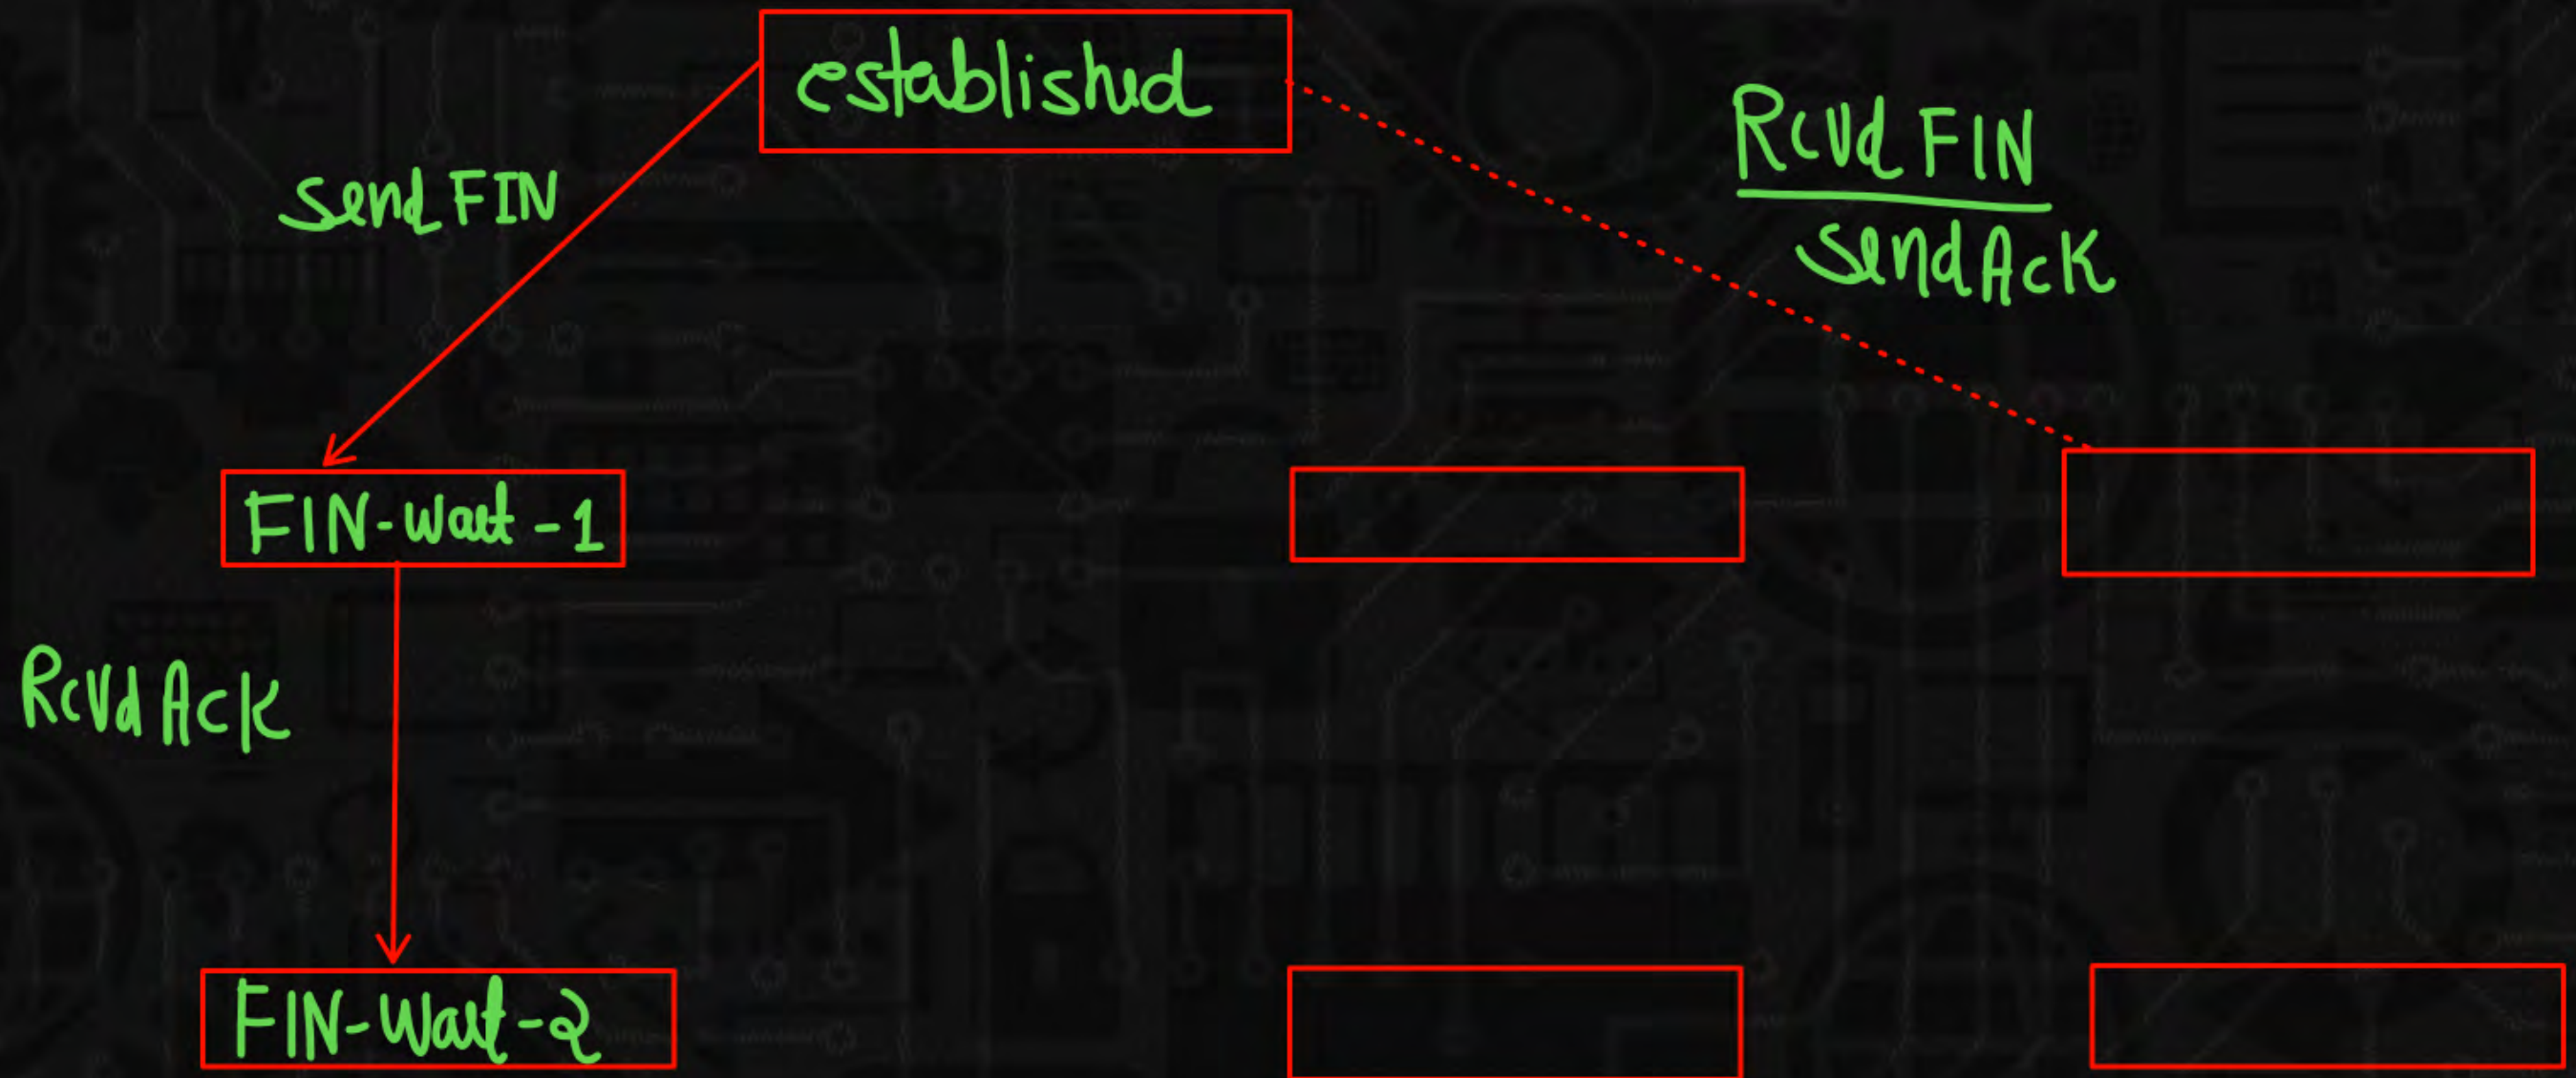

MCQ

Consider a TCP client and a TCP server running on two different machines. After completing data transfer, the TCP client calls close to terminate the connection and a FIN segment is sent to the TCP server. Server-side TCP responds by sending an ACK. Which is received by the client-side TCP. As per the TCP connection state diagram (RFC 793). In which state does the client-side TCP connection wait for the FIN from the server-side TCP?

[GATE-2017-CN: 1M]

- | | |
|------------------------------------|---|
| <input type="radio"/> A LAST-ACK | <input type="radio"/> B TIME-WAIT |
| <input type="radio"/> C FIN-WAIT-1 | <input checked="" type="radio"/> D FIN-WAIT-2 |

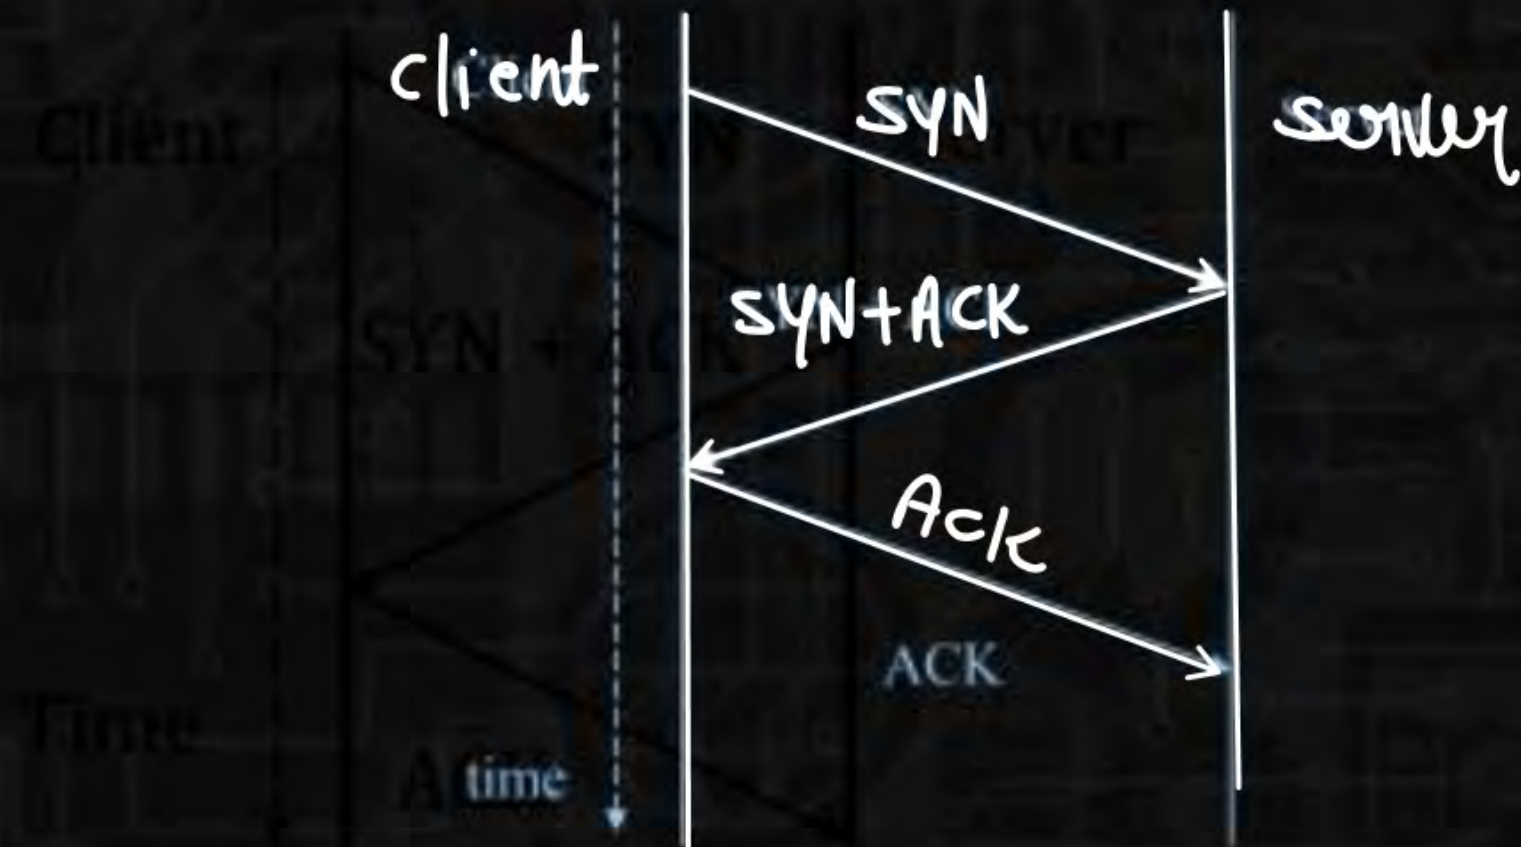

MCQ

Which of the following statements are TRUE?

- S_1 : Loss of SYN + ACK from the server will not establish a connection (T)
 S_2 : Loss of ACK from the client cannot establish the connection (F)
 S_3 : The server moves LISTEN \rightarrow SYN_RCVD \rightarrow SYN_SENT \rightarrow ESTABLISHED in the state machine on no packet loss (F)
 S_4 : The server moves LISTEN \rightarrow SYN_RCVD \rightarrow ESTABLISHED in the state machine on no packet loss. (T)

- ☐ A S_2 and S_3 only
☒ B S_1 and S_4 only
☐ C S_1 and S_3 only
☐ D S_2 and S_4 only

Q.3

Consider a TCP server is in close wait state in TCP state transition diagram, which state TCP server moves after sending FIN segment to TCP client?

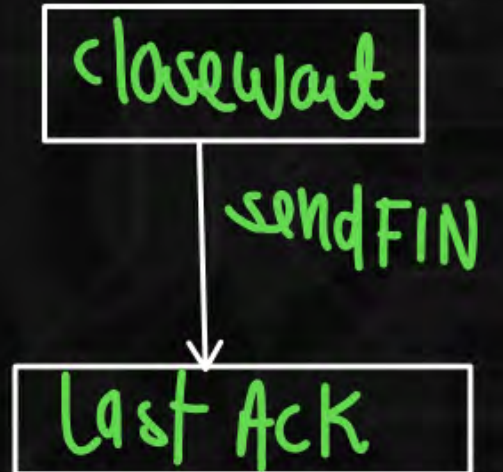

- ☒ A LAST-ACK
- ☐ B TIME-WAIT
- ☐ C FIN-WAIT-1
- ☐ D FIN-WAIT-2

FIN-Wait-1

FIN-Wait-2
